Course Description

This course examines and applies the principles of information systems analysis. It surveys project management, feasibility and analysis, systems requirement definition and resource allocation. It utilizes a structured systems development methodology that spans the entirety of the information system lifecycle, which starts with the conception of the need for a specific information system and ends with the implementation of that system. The course utilizes a case study approach in which students initiate the analysis and logical design of a limited-scope information system.

Course Prerequisites

ICT 202

Required Materials

* No required textbook.

- * Extensive lecture notes will be provided.
- * Other reading materials will be posted on Canvas every week.

Student Learning Outcomes

The overall course objective is to give you the concepts and skills you need to analyze and design information systems. After the successful completion of this course, you will be able to:

- *Provide a solid understanding of the fundamental principles of information systems and system analysis.
- *Enhance critical thinking skills using scenario-based tasks to help students develop organization, analysis, problem-solving, and decision-making skills they can apply in the workplace.
- *Provide an understanding of some of real-life ethical issues in an Information Technology (IT) environment.
